

```
def add10(a):  
    return a + 10
```

```
x = add10(5)  
x
```

```
15
```

✓ Lamda (function name = lambda Input : Output)

```
Add10 = lambda a : a + 10
```

```
x = Add10(5)  
x
```

```
15
```

```
multiply = lambda a, b : a * b
```

```
multiply(4, 5)
```

```
20
```

```
even_fn = lambda x : True if x%2 == 0 else False
```

```
even_fn(4)
```

```
True
```

```
List = [1,3,2,5,20]  
EvnLst = []  
OddLst = []  
for i in List:  
    if even_fn(i) == True:  
        EvnLst.append(i)  
    else:  
        OddLst.append(i)
```

```
print(EvnLst)  
print(OddLst)
```

```
[2, 20]  
[1, 3, 5]
```

```
r_Even = list(filter(even_fn, List))
```

```
print(r_Even)
```

```
[2, 20]
```

```
r_Even = list(filter(lambda x : x %2 == 0, List))
```

```
r_Even
```

```
[2, 20]
```

```
r_Even = list(map(lambda i : i **2, List))  
r_Even
```

```
[1, 9, 4, 25, 400]
```

Lambda Funtion Within Method

```
def myfunc():  
    return lambda a, b : a * b
```

```
multiply = myfunc()
```

```
multiply(2, 3)
```

```
6
```
